

Glossary of Terms

Product, engineering, security and operations terminology.

This document explains its subject first in plain language, then in engineering detail. It is grounded in the Craves repository snapshot and deliberately separates current implementation, legacy/reference code, milestone foundations and repository gaps so readers do not mistake aspiration for proof.

Version 1.0 | Evidence date: 14 August 2026 | Repository: [rmorampudi09-arch/Craves-Build-platform](#) | Snapshot commit: [3225f7fa531a6b07185fb5e034f7930f8bd8b571](#)

Glossary terms 1-3

BFF

Backend-for-Frontend: server-side routes tailored to one UI.

Craves context

The primary customer-facing web implementation is apps/customer-web-next, a Next.js 14 App Router application containing customer, chef and newer admin/support modules. This term is used only in the sense supported by source or the definition above.

APIM

Azure API Management: policy and routing gateway.

Craves context

Azure API Management is the intended policy and routing front door between clients/BFFs and backend services. This term is used only in the sense supported by source or the definition above.

JWT

Signed token carrying identity and authorization claims.

Craves context

Authentication proves who the caller is; authorization decides what that caller may do. Craves uses phone OTP for the current web and JWT-based authorization in backend services, with Entra External ID/PKCE documented for the mobile milestone. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 4-6

RBAC

Role-Based Access Control.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

OTP

One-Time Password.

Craves context

Authentication proves who the caller is; authorization decides what that caller may do. Craves uses phone OTP for the current web and JWT-based authorization in backend services, with Entra External ID/PKCE documented for the mobile milestone. This term is used only in the sense supported by source or the definition above.

PKCE

OAuth proof binding authorization to the app that started it.

Craves context

Native mobile is proven mainly through milestone identity/API/CI contracts rather than a clearly complete runnable app on the reviewed main snapshot. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 7-9

MFA

Multi-Factor Authentication.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

HTTP-only cookie

Cookie ordinary browser JavaScript cannot read directly.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Access token

Short-lived API credential.

Craves context

Authentication proves who the caller is; authorization decides what that caller may do. Craves uses phone OTP for the current web and JWT-based authorization in backend services, with Entra External ID/PKCE documented for the mobile milestone. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 10-12

Refresh token

Credential used to obtain a new access token.

Craves context

Authentication proves who the caller is; authorization decides what that caller may do. Craves uses phone OTP for the current web and JWT-based authorization in backend services, with Entra External ID/PKCE documented for the mobile milestone. This term is used only in the sense supported by source or the definition above.

Keychain

Apple secure credential storage.

Craves context

Native mobile is proven mainly through milestone identity/API/CI contracts rather than a clearly complete runnable app on the reviewed main snapshot. This term is used only in the sense supported by source or the definition above.

Android Keystore

Android secure key/credential facility.

Craves context

Native mobile is proven mainly through milestone identity/API/CI contracts rather than a clearly complete runnable app on the reviewed main snapshot. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 13-15

Spring Boot

Java framework used by active Craves services.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Microservice

Separately deployable focused service.

Craves context

The active backend target is seven Spring Boot services: auth, user-chef, catalog, order, subscription, integration and notification. This term is used only in the sense supported by source or the definition above.

Flyway

Database schema-migration tool.

Craves context

The active backend target is seven Spring Boot services: auth, user-chef, catalog, order, subscription, integration and notification. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 16-18

Actuator

Spring Boot health/operational endpoints.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Catalog

Meal, cuisine and availability domain.

Craves context

Catalog is the source of browseable meal and cuisine information used by discovery and commerce validation. This term is used only in the sense supported by source or the definition above.

Quote

Backend-authoritative checkout calculation.

Craves context

Checkout turns a basket into a validated purchase attempt and combines address, authoritative quote, order creation and hosted payment. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 19-21

Idempotency

Protection against unintended duplicate effects.

Craves context

Order management is the transactional spine of Craves: create, retrieve, status, cancellation/refund, delivery state, ETA/shortage, proof and administrative controls. This term is used only in the sense supported by source or the definition above.

Problem Details

Structured HTTP error format.

Craves context

Order management is the transactional spine of Craves: create, retrieve, status, cancellation/refund, delivery state, ETA/shortage, proof and administrative controls. This term is used only in the sense supported by source or the definition above.

requestId

Failure-correlation identifier.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 22-24

Correlation ID

Identifier propagated across distributed components.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Reconciliation

Background synchronization of ambiguous states.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

MSSQL

Microsoft SQL Server.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 25-27

PostgreSQL

Relational database supported by order-service profiles.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Cashfree

Hosted-payment provider used by the current web.

Craves context

Payments are separated from raw card handling so the Craves UI can use provider-hosted entry while the backend protects order/payment state. This term is used only in the sense supported by source or the definition above.

Razorpay

Provider documented for backend callbacks/payment links.

Craves context

Payments are separated from raw card handling so the Craves UI can use provider-hosted entry while the backend protects order/payment state. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 28-30

Webhook

Inbound provider callback.

Craves context

Payments are separated from raw card handling so the Craves UI can use provider-hosted entry while the backend protects order/payment state. This term is used only in the sense supported by source or the definition above.

HMAC

Keyed message-authentication signature.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Hosted payment

Provider-owned payment-entry flow.

Craves context

Payments are separated from raw card handling so the Craves UI can use provider-hosted entry while the backend protects order/payment state. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 31-33

Refund

Eligible return-of-funds operation.

Craves context

Payments are separated from raw card handling so the Craves UI can use provider-hosted entry while the backend protects order/payment state. This term is used only in the sense supported by source or the definition above.

ETA

Estimated Time of Arrival.

Craves context

Order management is the transactional spine of Craves: create, retrieve, status, cancellation/refund, delivery state, ETA/shortage, proof and administrative controls. This term is used only in the sense supported by source or the definition above.

Completion proof

Evidence associated with fulfillment completion.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 34-36

Blob storage

Object/file storage.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Domain whitelist

Approved domains accepted as trusted media.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Subscription

Repeat-service relationship between customer and plan.

Craves context

Subscriptions support repeat service and entitlements on top of one-off ordering. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 37-39

Entitlement

Server-evaluated right to a gated capability.

Craves context

Subscriptions support repeat service and entitlements on top of one-off ordering. This term is used only in the sense supported by source or the definition above.

Usage counter

Persisted entitlement-consumption measure.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Notification preference

User communication choice.

Craves context

Notifications centralize email, SMS and push so domain services do not each implement vendor logic. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 40-42

Device token

Push-provider routing identifier.

Craves context

Authentication proves who the caller is; authorization decides what that caller may do. Craves uses phone OTP for the current web and JWT-based authorization in backend services, with Entra External ID/PKCE documented for the mobile milestone. This term is used only in the sense supported by source or the definition above.

FCM

Firebase Cloud Messaging.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Azure Communication Services

Azure email/SMS provider used by notification-service.

Craves context

The active backend target is seven Spring Boot services: auth, user-chef, catalog, order, subscription, integration and notification. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 43-45

Service Bus

Azure messaging service.

Craves context

Notifications centralize email, SMS and push so domain services do not each implement vendor logic. This term is used only in the sense supported by source or the definition above.

Domain event

Message describing a meaningful business event.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Provider adapter

Module translating Craves operations to a provider API.

Craves context

integration-service is the provider boundary so third-party APIs do not leak provider-specific rules into every domain. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 46-48

Stub provider

Deterministic non-live adapter disabled by default.

Craves context

integration-service is the provider boundary so third-party APIs do not leak provider-specific rules into every domain. This term is used only in the sense supported by source or the definition above.

Geocoding

Conversion between addresses and coordinates.

Craves context

Location/address features help a customer provide a deliverable address while retaining manual fallback when device permission or geocoding fails. This term is used only in the sense supported by source or the definition above.

Consent center

User preferences UI wired to backend enforcement.

Craves context

Privacy capability includes consent preferences plus recent customer data export/deletion implementation on main. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 49-51

Data export

Authorized request for supported customer data.

Craves context

Privacy capability includes consent preferences plus recent customer data export/deletion implementation on main. This term is used only in the sense supported by source or the definition above.

Account deletion

Authorized customer deletion workflow.

Craves context

Privacy capability includes consent preferences plus recent customer data export/deletion implementation on main. This term is used only in the sense supported by source or the definition above.

Semantic concierge

AI-assisted meal discovery.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 52-54

SignalR

Real-time transport used by documented AI concierge.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Container image

Packaged immutable runtime.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

ACR

Azure Container Registry.

Craves context

The repository has broad CI/CD references across backend, frontend, mobile, APIM, data, privacy, security, smoke and release controls. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 55-57

Container App

Azure host documented for newer customer web.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Revision

Versioned Container App deployment.

Craves context

The repository has broad CI/CD references across backend, frontend, mobile, APIM, data, privacy, security, smoke and release controls. This term is used only in the sense supported by source or the definition above.

Readiness check

Probe validating safe traffic readiness.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 58-60

Rollback

Return to a known-good state.

Craves context

The repository has broad CI/CD references across backend, frontend, mobile, APIM, data, privacy, security, smoke and release controls. This term is used only in the sense supported by source or the definition above.

CI/CD

Automated integration/test/delivery workflow.

Craves context

The repository has broad CI/CD references across backend, frontend, mobile, APIM, data, privacy, security, smoke and release controls. This term is used only in the sense supported by source or the definition above.

Release gate

Condition before promotion continues.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 61-63

Smoke test

Small critical-path validation.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Key Vault

Azure secret/certificate store.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Named value

APIM policy configuration value.

Craves context

Azure API Management is the intended policy and routing front door between clients/BFFs and backend services. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 64-66

OpenAPI

Machine-readable API description.

Craves context

Azure API Management is the intended policy and routing front door between clients/BFFs and backend services. This term is used only in the sense supported by source or the definition above.

Legacy/reference

Older source not assumed to be preferred runtime.

Craves context

Older web/admin/Node API paths remain useful for migration history but are not automatically treated as the preferred current architecture. This term is used only in the sense supported by source or the definition above.

Milestone foundation

Handover/contract/CI groundwork without complete-runtime proof.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 67-69

Repository gap

Referenced artifact/value not verified.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

PII

Personally Identifiable Information.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Least privilege

Only the access required for the task.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 70-72

Audit trail

Evidence of a sensitive action and change.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Observability

Understanding runtime state from health/logs/metrics/traces.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Runbook

Repeatable operational procedure.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 73-75

Backout plan

Method to return to a safe state after failed change.

Craves context

Subscriptions support repeat service and entitlements on top of one-off ordering. This term is used only in the sense supported by source or the definition above.

Schema migration

Versioned database change.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Checksum

Digest detecting unexpected artifact changes.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 76-78

SHA-256

Cryptographic hash algorithm.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Latency

Time an operation takes.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Timeout

Maximum wait before treating work as failed.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 79-81

Retry

Controlled repetition of a failed operation.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Backoff

Increasing delay between retries.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Failover

Switch to alternate healthy resource.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 82-84

Serviceability

Whether a location/order can be fulfilled.

Craves context

The active backend target is seven Spring Boot services: auth, user-chef, catalog, order, subscription, integration and notification. This term is used only in the sense supported by source or the definition above.

Evidence packet

Safe ticket evidence including time and request IDs.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Root cause

Underlying incident condition.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 85-87

Mitigation

Action reducing impact before permanent fix.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Residual risk

Risk remaining after controls.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Technical debt

Known engineering compromise requiring remediation.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 88-90

Diligence

Evidence review used to verify product/technology claims.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

BFF

Backend-for-Frontend: server-side routes tailored to one UI.

Craves context

The primary customer-facing web implementation is apps/customer-web-next, a Next.js 14 App Router application containing customer, chef and newer admin/support modules. This term is used only in the sense supported by source or the definition above.

APIM

Azure API Management: policy and routing gateway.

Craves context

Azure API Management is the intended policy and routing front door between clients/BFFs and backend services. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 91-93

JWT

Signed token carrying identity and authorization claims.

Craves context

Authentication proves who the caller is; authorization decides what that caller may do. Craves uses phone OTP for the current web and JWT-based authorization in backend services, with Entra External ID/PKCE documented for the mobile milestone. This term is used only in the sense supported by source or the definition above.

RBAC

Role-Based Access Control.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

OTP

One-Time Password.

Craves context

Authentication proves who the caller is; authorization decides what that caller may do. Craves uses phone OTP for the current web and JWT-based authorization in backend services, with Entra External ID/PKCE documented for the mobile milestone. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 94-96

PKCE

OAuth proof binding authorization to the app that started it.

Craves context

Native mobile is proven mainly through milestone identity/API/CI contracts rather than a clearly complete runnable app on the reviewed main snapshot. This term is used only in the sense supported by source or the definition above.

MFA

Multi-Factor Authentication.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

HTTP-only cookie

Cookie ordinary browser JavaScript cannot read directly.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 97-99

Access token

Short-lived API credential.

Craves context

Authentication proves who the caller is; authorization decides what that caller may do. Craves uses phone OTP for the current web and JWT-based authorization in backend services, with Entra External ID/PKCE documented for the mobile milestone. This term is used only in the sense supported by source or the definition above.

Refresh token

Credential used to obtain a new access token.

Craves context

Authentication proves who the caller is; authorization decides what that caller may do. Craves uses phone OTP for the current web and JWT-based authorization in backend services, with Entra External ID/PKCE documented for the mobile milestone. This term is used only in the sense supported by source or the definition above.

Keychain

Apple secure credential storage.

Craves context

Native mobile is proven mainly through milestone identity/API/CI contracts rather than a clearly complete runnable app on the reviewed main snapshot. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 100-102

Android Keystore

Android secure key/credential facility.

Craves context

Native mobile is proven mainly through milestone identity/API/CI contracts rather than a clearly complete runnable app on the reviewed main snapshot. This term is used only in the sense supported by source or the definition above.

Spring Boot

Java framework used by active Craves services.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Microservice

Separately deployable focused service.

Craves context

The active backend target is seven Spring Boot services: auth, user-chef, catalog, order, subscription, integration and notification. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 103-105

Flyway

Database schema-migration tool.

Craves context

The active backend target is seven Spring Boot services: auth, user-chef, catalog, order, subscription, integration and notification. This term is used only in the sense supported by source or the definition above.

Actuator

Spring Boot health/operational endpoints.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Catalog

Meal, cuisine and availability domain.

Craves context

Catalog is the source of browseable meal and cuisine information used by discovery and commerce validation. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 106-108

Quote

Backend-authoritative checkout calculation.

Craves context

Checkout turns a basket into a validated purchase attempt and combines address, authoritative quote, order creation and hosted payment. This term is used only in the sense supported by source or the definition above.

Idempotency

Protection against unintended duplicate effects.

Craves context

Order management is the transactional spine of Craves: create, retrieve, status, cancellation/refund, delivery state, ETA/shortage, proof and administrative controls. This term is used only in the sense supported by source or the definition above.

Problem Details

Structured HTTP error format.

Craves context

Order management is the transactional spine of Craves: create, retrieve, status, cancellation/refund, delivery state, ETA/shortage, proof and administrative controls. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 109-111

requestId

Failure-correlation identifier.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Correlation ID

Identifier propagated across distributed components.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Reconciliation

Background synchronization of ambiguous states.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 112-114

MSSQL

Microsoft SQL Server.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

PostgreSQL

Relational database supported by order-service profiles.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Cashfree

Hosted-payment provider used by the current web.

Craves context

Payments are separated from raw card handling so the Craves UI can use provider-hosted entry while the backend protects order/payment state. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 115-117

Razorpay

Provider documented for backend callbacks/payment links.

Craves context

Payments are separated from raw card handling so the Craves UI can use provider-hosted entry while the backend protects order/payment state. This term is used only in the sense supported by source or the definition above.

Webhook

Inbound provider callback.

Craves context

Payments are separated from raw card handling so the Craves UI can use provider-hosted entry while the backend protects order/payment state. This term is used only in the sense supported by source or the definition above.

HMAC

Keyed message-authentication signature.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 118-120

Hosted payment

Provider-owned payment-entry flow.

Craves context

Payments are separated from raw card handling so the Craves UI can use provider-hosted entry while the backend protects order/payment state. This term is used only in the sense supported by source or the definition above.

Refund

Eligible return-of-funds operation.

Craves context

Payments are separated from raw card handling so the Craves UI can use provider-hosted entry while the backend protects order/payment state. This term is used only in the sense supported by source or the definition above.

ETA

Estimated Time of Arrival.

Craves context

Order management is the transactional spine of Craves: create, retrieve, status, cancellation/refund, delivery state, ETA/shortage, proof and administrative controls. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 121-123

Completion proof

Evidence associated with fulfillment completion.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Blob storage

Object/file storage.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Domain whitelist

Approved domains accepted as trusted media.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 124-126

Subscription

Repeat-service relationship between customer and plan.

Craves context

Subscriptions support repeat service and entitlements on top of one-off ordering. This term is used only in the sense supported by source or the definition above.

Entitlement

Server-evaluated right to a gated capability.

Craves context

Subscriptions support repeat service and entitlements on top of one-off ordering. This term is used only in the sense supported by source or the definition above.

Usage counter

Persisted entitlement-consumption measure.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 127-129

Notification preference

User communication choice.

Craves context

Notifications centralize email, SMS and push so domain services do not each implement vendor logic. This term is used only in the sense supported by source or the definition above.

Device token

Push-provider routing identifier.

Craves context

Authentication proves who the caller is; authorization decides what that caller may do. Craves uses phone OTP for the current web and JWT-based authorization in backend services, with Entra External ID/PKCE documented for the mobile milestone. This term is used only in the sense supported by source or the definition above.

FCM

Firebase Cloud Messaging.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 130-132

Azure Communication Services

Azure email/SMS provider used by notification-service.

Craves context

The active backend target is seven Spring Boot services: auth, user-chef, catalog, order, subscription, integration and notification. This term is used only in the sense supported by source or the definition above.

Service Bus

Azure messaging service.

Craves context

Notifications centralize email, SMS and push so domain services do not each implement vendor logic. This term is used only in the sense supported by source or the definition above.

Domain event

Message describing a meaningful business event.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 133-135

Provider adapter

Module translating Craves operations to a provider API.

Craves context

integration-service is the provider boundary so third-party APIs do not leak provider-specific rules into every domain. This term is used only in the sense supported by source or the definition above.

Stub provider

Deterministic non-live adapter disabled by default.

Craves context

integration-service is the provider boundary so third-party APIs do not leak provider-specific rules into every domain. This term is used only in the sense supported by source or the definition above.

Geocoding

Conversion between addresses and coordinates.

Craves context

Location/address features help a customer provide a deliverable address while retaining manual fallback when device permission or geocoding fails. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 136-138

Consent center

User preferences UI wired to backend enforcement.

Craves context

Privacy capability includes consent preferences plus recent customer data export/deletion implementation on main. This term is used only in the sense supported by source or the definition above.

Data export

Authorized request for supported customer data.

Craves context

Privacy capability includes consent preferences plus recent customer data export/deletion implementation on main. This term is used only in the sense supported by source or the definition above.

Account deletion

Authorized customer deletion workflow.

Craves context

Privacy capability includes consent preferences plus recent customer data export/deletion implementation on main. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 139-141

Semantic concierge

AI-assisted meal discovery.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

SignalR

Real-time transport used by documented AI concierge.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Container image

Packaged immutable runtime.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 142-144

ACR

Azure Container Registry.

Craves context

The repository has broad CI/CD references across backend, frontend, mobile, APIM, data, privacy, security, smoke and release controls. This term is used only in the sense supported by source or the definition above.

Container App

Azure host documented for newer customer web.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Revision

Versioned Container App deployment.

Craves context

The repository has broad CI/CD references across backend, frontend, mobile, APIM, data, privacy, security, smoke and release controls. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 145-147

Readiness check

Probe validating safe traffic readiness.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Rollback

Return to a known-good state.

Craves context

The repository has broad CI/CD references across backend, frontend, mobile, APIM, data, privacy, security, smoke and release controls. This term is used only in the sense supported by source or the definition above.

CI/CD

Automated integration/test/delivery workflow.

Craves context

The repository has broad CI/CD references across backend, frontend, mobile, APIM, data, privacy, security, smoke and release controls. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 148-150

Release gate

Condition before promotion continues.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Smoke test

Small critical-path validation.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Key Vault

Azure secret/certificate store.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 151-153

Named value

APIM policy configuration value.

Craves context

Azure API Management is the intended policy and routing front door between clients/BFFs and backend services. This term is used only in the sense supported by source or the definition above.

OpenAPI

Machine-readable API description.

Craves context

Azure API Management is the intended policy and routing front door between clients/BFFs and backend services. This term is used only in the sense supported by source or the definition above.

Legacy/reference

Older source not assumed to be preferred runtime.

Craves context

Older web/admin/Node API paths remain useful for migration history but are not automatically treated as the preferred current architecture. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 154-156

Milestone foundation

Handover/contract/CI groundwork without complete-runtime proof.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Repository gap

Referenced artifact/value not verified.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

PII

Personally Identifiable Information.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 157-159

Least privilege

Only the access required for the task.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Audit trail

Evidence of a sensitive action and change.

Craves context

Craves includes a governed semantic meal concierge for assisted discovery rather than an authority that can bypass commerce rules. This term is used only in the sense supported by source or the definition above.

Observability

Understanding runtime state from health/logs/metrics/traces.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 160-162

Runbook

Repeatable operational procedure.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Backout plan

Method to return to a safe state after failed change.

Craves context

Subscriptions support repeat service and entitlements on top of one-off ordering. This term is used only in the sense supported by source or the definition above.

Schema migration

Versioned database change.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.

Glossary terms 163-165

Checksum

Digest detecting unexpected artifact changes.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

SHA-256

Cryptographic hash algorithm.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Latency

Time an operation takes.

Craves context

Craves is a two-sided food marketplace connecting customers with home-chef supply. The repository contains a newer Next.js customer/chef web application, seven Spring Boot services, APIM guidance, legacy web/admin/API paths, infrastructure assets and milestone handovers. This term is used only in the sense supported by source or the definition above.

Evidence note

Definitions are documentation aids. Platform-specific behavior remains governed by repository sources at main @ 3225f7fa531a.
